A GLOBAL BRAND WITH TRADITION

Since its establishment in 1913, Eschenbach Optik has been combining traditional business values with modern innovative flair. Within a century Eschenbach Optik has become one of the leading suppliers of optical products - both in Germany and abroad. The product range extends from eyewear frames and sunglasses, to binoculars and right through to magnifiers, reading glasses and special vision aids.

With subsidiaries in twelve countries, more than 30 international trade partners and over 480 employees throughout the world, today Eschenbach Optik has a global presence.

VISION TECHNOLOGY PRODUCTS

In this catalogue you will find our extensive range of magnifying vision aids. The term "Vision Technology Products" stands for innovative research and development, modern technologies, as well as precision production methods - and a level of quality which meets the very highest demands in terms of optimum optical performance, reliability and intuitive operation.

The diversity of our range of magnifying vision aids allows you to provide your customers with the optimum solution for meeting all their everyday vision requirements.

LOW VISION

In our catalogue you will therefore find a wide range of products to meet the highly diverse needs of those suffering from visual impairment, making their daily life so much easier and therefore enabling them to regain maximum independence and maximum quality of life.

EASY VISION

As we get older, our vision deteriorates and this is something that happens to everyone. From the age of 60, this change becomes increasingly noticeable and sometimes even the best corrective eyewear is not enough.

With the "Easy Vision" concept from Eschenbach Optik, additional, innovative optical products are able to compensate for the visual impairment and relaxed vision is once again possible.

MADE IN GERMANY

From the initial concept right through to the finished product - Eschenbach Optik carries out all of this work at its site in Nuremberg and this is how we are able to guarantee exceptional brand quality "MADE IN GERMANY".

SALES SUPPORT

On pages 66-77, you can find our range of sales support products – including versatile displays and attractive presentation systems. Ask your representative about further advertising opportunities.

DETAILED INFORMATION

The "Technical Information" section contains a summary of technical specifications and you can find information on visual impairment in the "Information" section.

INDIVIDUAL LENS RANGE

Single vision or multifocal spectacle lenses with corrections to suit specific individual requirements, cut-off filters with individual strengths and reading glasses with individually adapted high additions can be found in the separate "2015 Individual Lens Range" catalogue.

ILLUMINATED POCKET MAGNIFIERS

mobilux® LED

- Batteries are easy to change as the battery cover is easy to open and contact springs clearly indicate the battery position.
- Improved comfort due to eyelet for lanyard.
- The most suitable colour temperature and light intensity can be selected by attaching one of the three filters supplied.
- The LED light does not require changing.
The LED light used by Eschenbach Optik has a service life of approx. 50,000 hours.
- The battery life is up to 10 x longer in comparison to a conventional light.
- Bright, even illumination provided by SMD LED and collimation optics.
- Defined focusing distance: in the case of all aspheric magnifiers and reading magnifiers from Eschenbach Optik the focusing distance (aE: distance from the eye to the virtual image) is precisely 400 mm. The image can therefore be seen clearly with readers which have an addition of +2.5 dpt.

mobilux® DIGITAL Touch HD can be found on page 28.

CUSTOMER BENEFITS

READING MAGNIFIERS

STABLE SOLUTIONS
FOR BRIGHT MAGNIFICATION.

CUSTOMER BENEFITS

- ✚ The generous width and the red guide line make it easier to read tables.
- ✚ As they only magnify in one direction, they allow strainfree reading over long periods of time.

Item	Dimensions	Magnification	Details
2605	200 x 25 mm	1:1.8	<ul style="list-style-type: none"> • With grip bar • Incl. red guide line
2606	122 x 26 mm	1:2.0	<ul style="list-style-type: none"> • Incl. red guide line • Higher magnification due to aspheric surface • Scratch-resistant underside • Can also be used with visolux large field magnifiers (Item Number 263611, page 19)
2608	250 x 35 mm	1:1.8	<ul style="list-style-type: none"> • Incl. red guide line

MAGNIFYING RULERS

- Magnifying rulers only magnify in one direction, the height of the letters is therefore increased but the width remains the same.

CUSTOMER BENEFITS

- ✚ „Tremble-free“ image as the bright field magnifiers are placed directly on the reading material.
- ✚ Very handy and compact.
- ✚ Due to their high accommodation capacity, these bright field magnifiers are particularly suitable for children to support the remaining visual acuity.
- ✚ Bright field magnifiers are also ideal as combination magnifiers (in combination with high addition or systems with reading caps).

Example:

High addition 6 dpt = 1.5 x
 + Bright field magnifier = 1.8 x
 Total magnification = 2.7 x

With a bright field magnifier the reading distance of 18 cm (6 dpt) remains the same with double the magnification!

Item	Dimensions	Magnification	Details
1420	Ø 65 mm	1:1.8	-
1421	Ø 65 mm	1:1.8	Incl. red guide line (removable)
1424	Ø 45 mm	1:1.8	Extremely light

The combination of a bright-field magnifier and reading glasses doubles the magnification at the same reading distance.

BRIGHT FIELD MAGNIFIERS

- A high level of image brightness.
- The image has double the surface brightness in comparison to ambient light conditions.
- By approaching the object, a magnification level of up to 6 x can be achieved by means of the accommodative power.
- All Eschenbach Optik bright-field magnifiers are supplied in a microfibre pouch which can also be used to clean the magnifiers.
- Magnification 1:1.8
- Object and image position are virtually on the same level.

ILLUMINATED STAND MAGNIFIERS

system varioPLUS

- Details relating to magnification/dioptre value/recommended eye-lens distance are stated on all magnifier heads.
- Bright, even illumination of the reading text provided by enclosed magnifier heads made from a light material.
- To achieve a uniform reading distance, Eschenbach Optik recommends using the system varioPLUS in combination with a reading stand (Item No. 1605, see page 64).

For technical information please refer to page 78.

CUSTOMER BENEFITS

- ✚ Particularly suitable for reading over long periods of time and for users who cannot hold magnifiers freely (e.g. age-related shaking or Parkinson's disease).
- ✚ Magnifier heads with a diameter greater than 58 mm (15539-, 15549-, 15599-) are fitted with a retractable red reading line for easier line orientation and increased reading speed.
- ✚ The rectangular magnifier heads (15806-, 15826-) are equipped with a supplementary swivel lens for additional magnification.
- ✚ Choice of 3 different colour temperatures via filters.

scribolux

- NEW: Push-button switch for easy on/off operation.
- NEW: Automatic light-off function after 30 minutes to avoid unnecessary power consumption.
- High level of image brightness and large visual field.
- Distance lens – supporting surface: 7.5 cm (apex of lens).
- In the case of all aspheric magnifiers and reading magnifiers from Eschenbach Optik the focusing distance (a_E : distance from the eye to the virtual image) is precisely 400 mm. The image can therefore be seen clearly with readers which have an addition of +2.5 dpt.
- Supplied with microfibre pouch to protect the lens. The pouch can also be used for cleaning the lens.

CUSTOMER BENEFITS

- ✚ Plenty of space for writing under the lens as the lens is positioned at a spacious distance from the supporting surface and the magnifier base has an open design.
- ✚ Easy to move across the reading material.
- ✚ With comfortable tilted lens.
- ✚ Bright, even and glare-free illumination.
- ✚ Leaves both hands free for carrying out tasks under the scratch-resistant lens without shadowing.

wellnessPROTECT®

wellnessPROTECT® XL

- Improved contrast vision and minimisation of glare by blocking short-wave, energy-rich light components.
- Available in the active photochromic options, in the following tints: 15 %, 65 %, 85 %, polarised 75 % and graded 50-15 % for inside and out.
- The phototropic lenses of wellnessPROTECT® active protect the eyes in all light conditions.
- Available in different frame sizes or as clip-ons, each including case.
- Frames are darkened on the inside and the upper edge of the frame extended to reduce the amount of light entering from the top.
- Transparent side shields protect against glare and allow orientation to the side.
- Side Ventilation slot between temple and middle section prevents fogging of the lenses.
- 100 % UV protection and up to 99 % blue absorption.

CUSTOMER BENEFITS

- ✚ All-round protection for the eyes against the harmful rays of the sun and against unpleasant glare.
- ✚ Improved contrast vision.
- ✚ Attractive design that makes wellnessPROTECT® look like sunglasses.
- ✚ Improved colour recognition in comparison to conventional cut-off filter eyewear.
- ✚ Ideal for spending long periods outdoors, winter sports, for eyes that are sensitive to glare, for retinal disease and following cataract operations.

Ideal for spectacle wearers: wellnessPROTECT® XL is intended for wearing over the correction frame.

with wellnessPROTECT®

without wellnessPROTECT®

wellnessPROTECT® filter lenses have an additional cut-off filter. In addition to UV light, they also absorb shortwave, energy-rich light components. Contrast vision is therefore improved and unpleasant glare is reduced.

wellnessPROTECT® is available with a variety of tints to suit any light conditions. The details relating to the filter lenses refer to the tint which is applied to the base filter.

Eyewear and clip-ons

- Glazed with wellnessPROTECT® plano lenses 15 %, 65 %, polarizing 75 %, 85 % and graded 50 -15 %.
- The description relates to the absorption of the additional tint overlay on the base filter. It does not relate to the light transmission level of the entire filter.

Cut-off filter eyewear

- Suitable above all for wearing outdoors.
- Troublesome shortwave components are filtered out in particular and at the same time a high degree of light transmission is also achieved. This means that the cutoff filters are suitable above all for those with visual impairment.
- The darkened upper edge of the glasses fits closely to the face and therefore provides effective protection against troublesome diffused light which can shine on the eyes from above. Additional protection is provided by the broad temples with integrated filters.
- Suitable for eye diseases such as cataracts, retinitis pigmentosa, macular degeneration, albinism, glaucoma, optic atrophy.
- 100 % UVA/UVB protection.
- Optical efficiency: ± 0 dpt.
- Flexible temple ends with excellent fit.
- Two different frame sizes.

It is always necessary to test out cut-off filters individually, preferably under the normal conditions of use, e.g. in the user's own home or outdoors.

CUSTOMER BENEFITS

Cut-off filter clip-ons

- Contrast enhanced vision and reduction in glare through absorption of the short-wave, energy-rich ultraviolet and blue components of the spectrum.
- The use of cut-off filters is recommended in particular for conditions such as retinitis pigmentosa, macular degeneration, albinism, optic atrophy, aphakia.
- The contrast-enhancing cut-off filter clip-ons are attached to the correction frame and can simply be flipped up where necessary.
- Optical efficiency: ± 0 dpt.

The UniVision® Hyperocular system

- Easy application – the adhesive tape ring enables easy correction of the lens position before the lens is attached permanently to the spectacle lens.
- Cost-efficient – more favourably priced than other hyperocular systems offering comparable magnification.
- Easy to change – if there is a change in the refraction or addition requirements, the lens can be quickly and easily attached to a new lens or replaced by a stronger lens.
- Anti-scratch coating – the front of the lens has antiscratch coating for protection during everyday use.

CUSTOMER BENEFITS

- ✚ Discreet appearance – with a diameter of only 22 mm and the transparent tape ring, the UniVision® lens is barely noticeable.
- ✚ Ultra-light – the lens weighs only 1 gram.
- ✚ Can be used immediately – the lens is fitted onto the spectacle lens on-site, the customer therefore does not need to wait for the delivery of special lenses.

162116 Reading cap 16.0 dpt

- The reading caps +3 dpt/+4 dpt/+5 dpt are also suitable for binocular use (close-up).

- ✚ Ideal for watching television.
- ✚ For reading printed text (newspapers, bank statements, TV guides, telephone directories, etc.).
- ✚ Lightweight therefore very comfortable to use.

 Silicate
  2.2x (-8.8x)
  16g

- ✚ Ideal for watching television and reading (in combination with reading caps).
- ✚ Simple to use due to large visual field.
- ✚ Ultralight, only 11 g – therefore extremely comfortable to use.

The 1632 and 16321 fitting cases are available for these systems. These can be found on page 52.

* The figures stated for visual field are average values. They will vary depending on the distance from the eye to the eyepiece. Further information can be found on page 78.

Accessories:

167302 Reading cap adapter

- With this intermediate adapter ring, the monoculars 16731 and 16732 can be used with the reading caps 16210-162116 (see page 50).

167303 Reading cap adapter

- With this intermediate adapter ring, the monoculars 16733 and 16734 can be used with the reading caps 16210-162116 (see page 50).

16711 viso-quick finger ring

- The finger ring ensures inconspicuous use and provides stability when used as a handheld monocular.

System carrier frame:

- Special frame for holding optical systems.
- Very light and sturdy titanium frame.
- Soft, adjustable, silicon saddle bridge.
- Spring-hinged, rubberised „golf club“ temple ends.
- Demo lenses with grid for simple centering of the lenses.
- Temples 150 mm, can be shortened.

Focusable Keplerian Systems

- Can be used as a hand-held monocular in combination with finger ring (Order No. 16711).
- Can be used as a spectacle mounted telescope.
- High level of light transmission and image brightness.
- Small, lightweight and inconspicuous.
- High quality, dust-proof metal housing.
- Very short near point.
- With an intermediate adapter can be used with reading caps 16210-162116 (see page 50).
- Roof prism system with multicoating.
- Supplied with: carrying cord, case.
- Compatible with adapter system 1625 (see page 52).

CUSTOMER BENEFITS

- ✚ Ideal for use when you're on the move (with finger ring).
- ✚ Can also be used in a system carrier frame.

UNIVERSAL CARRIER SYSTEM

uniADAPT

- Enables Keplerian systems to be quickly and easily mounted onto the carrier frame.

- Carrier system made from black, glass fibre reinforced plastic.
- Height adjustable, soft bridge.
- Easily adjustable pupillary distance of 54 to 74 mm.
- Supplied with 2 fixed monocular mounts, rubber blind cap, attachable rubber temple ends and zippered case.
- The monocular mounts are set at infinity in relation to each other.

1691

Case for special vision aids

- For storing Galilean and Keplerian systems which have been mounted onto the carrier frame.
- Artificial leather case with zipper fastening.
- A foam rubber insert ensures that the mounted systems can be safely stored and protects them from impacts.

167302	Adapter for reading caps for 16731 and 16732
167303	Adapter for reading caps for 16733 and 16734

The contents of the fitting cases will enable you to carry out adjustments for distance and near vision with the Galilean systems 1621 and 16225, as well as the Keplerian systems 16731, 16732, 16733 and 16734.

1625

Mounting Kit

- The 1625 Mounting Kit enables all Eschenbach Optik telescopic systems, both Galilean and Keplerian, to be mounted into any special frame.
- The main features of the 1625 Mounting Kit are the carrier lenses made from CR 39, together with the corresponding convergence adapters for working distances of 200 mm, 250 mm, 330 mm and an adapter for distance tasks.
- The convergence adapters allow binocular use in the distance range, as well as in a variety of close-up ranges.
- The mounting kit is suitable for monocular and binocular use in both the distance and close-up ranges.
- If an adjustment error occurs (incorrectly determined visual centre) minimal expense is incurred as only the carrier disks need to be reground.

- The wide focusing range enables raised or depressed features (e.g. holes) to be examined in detail.
- The wide adjustment range is even able to compensate for a high level of visual impairment.
- A high level of brightness is achieved as a result of the large lens aperture. Additional illumination is not usually required in daylight conditions.
- Precise focusing with adjustable wheel.
- The light can be used when required.
- Magnification 30 x, glass lenses.

Tube microscopes

- Micromagnifier with illumination.
- Suitable for inspecting a wide variety of surfaces such as metals, textiles, minerals, varnishes, etc.

ACCESSORIES AND RESOURCE MATERIALS

COMPACT DESIGN.
ENORMOUS BENEFITS.

1605

- Guarantees stability and a tremble-free image.
- Supporting surface area: 40 x 35 cm.
- Material: maple wood.
- 5 different angles of adjustment.
- Edge stopper prevents slipping.
- Supplied with clamp attachment for large papers.

ACCESSORIES FOR SPECIALIST VISION AIDS

Reading Stand

- The reading stand encourages an upright, orthopaedically correct posture and therefore prevents back pain.
- When the reading stand is used in conjunction with a magnifying vision aid (e.g. system varioPLUS), an optimum angle of view and a uniform distance to the reading material are always achieved, as well as bright illumination of the field of view.

1605 +
16051

Accessory for 1605:

16051 Guide rail

- Elderly people in particular often have problems guiding magnifiers across the reading material. The guide rail facilitates line orientation.
- The guide rail can be secured at any height by means of a fixing screw.
- Material: maple wood.

1600

Duo-clip table clamp

- Table clamp for attaching a reading magnifier or additional lighting (e.g. super-lite 2090 light set) to a table top or directly onto the reading material.
- The flexible, black gooseneck metal arm allows reading magnifiers to be placed in almost any position.
- Length of metal arm: 330 mm.
- The plastic clamps on each end have rubber inserts.
- Suitable for tables top with a thickness of up to approx. 4.5 cm.

1542

1544

1545

1542 Special halogen bulb

- For illuminated magnifier 1585 with illuminated.
- Reading line, 6 V, 2.4 Watt, supplied in a 2-pack.

1544 NF lens bulb

- For illuminated magnifiers 15103, 15105, 15107, 151010.
- 2.5 V, 250 mA, E10 supplied in a 2-pack.

1545 Spherical filament bulb

- For battery handle 159910.
- 2.5 V, 250 mA, supplied in a 5-pack.

PRESENTATION SYSTEM

Optoform IV

- High quality presentation and storage system for magnifiers, vision aids and other products from Eschenbach Optik.
- The impressive specification makes this system the ideal solution for creating an eye-catching display of product highlights to promote sales and provides a practical merchandising tool for successful sales discussions with customers.
- Elegant glass shelves immediately draw attention to the product highlights on open display.
- In the illuminated display case an entire product tray can be clearly presented behind the protective glass panel.
- NEW: A glazed section above the door now means that the top shelf can be easily viewed from the front.
- The sophisticated design ensures high quality product presentation.
- Enclosed main display unit with door ensures dust-free and safe storage of the trays.
- Flexible tray system presents the product range in a clear and professional manner, ideal for demonstrating products to your customers.
- Illuminated panel with interchangeable advertising image draws the attention of the customer to the product highlights.
- Display unit is equipped with casters - rear casters can be locked to guarantee stability.

General Technical Information:

All Vision Technology products from Eschenbach Optik comply with the applicable standards and directives of the European Union (EU) and the Federal Republic of Germany and therefore bear, where stipulated by law, the CE-symbol which is valid throughout Europe. This ensures that your customers receive a quality product which complies with the very latest quality standards.

Care instructions:

If the lens of your reading magnifier/illuminated magnifier requires cleaning, please pay attention to the following instructions: a soft cotton or linen cloth should be used for cleaning. The surface of the lens must only be gently wiped over. If the magnifier is very dirty then the cloth should be dampened with lukewarm water. **Never use alcohol-based solvents** or organic solvents for cleaning the lenses as these can damage the lenses.

Eschenbach Optik products have been awarded EN ISO 9001 and DIN ISO 14001:2004 certification (environmental management) and this is your guarantee of a high standard of quality.

Frequently asked questions concerning visual impairment

What is visual impairment?

A visual impairment exists when, despite applying the best corrective eyewear or contact lenses, vision is still impaired. Magnifying vision aids help the user to see better, despite visual impairment.

What are magnifying low vision aids?

Magnifying vision aids are defined as being all optical and electronic aids which compensate for the loss of vision by providing magnification of the images on the retina.

Magnifying vision aids improve the quality of life of those suffering from visual impairment so that they are able to carry out their daily tasks more easily and without assistance.

What are the different levels of visual impairment?

According to this method, a person is considered to have a visual impairment when the visual acuity cc of the better eye is no more than 0.3 (30 % residual visual acuity). Severe visual impairment exists when the visual acuity is 0.05 (5 % residual visual acuity) or less. According to this categorisation, a person is considered to blind when their better eye has a visual acuity cc of no more than 0.02 (2 % residual visual acuity). An eye is considered to be blind if the visual field is reduced to an angle of below 5° (e.g. retinitis pigmentosa).

How does this become noticeable in everyday life?

For example, a visual acuity of 0.6 to 0.7 is sufficient for reading a telephone directory. A visual acuity of 0.4 to 0.5 is sufficient for reading a newspaper. A visual acuity of 0.1 is generally sufficient for a person to be able to orientate themselves outdoors in good light conditions.

What are the most common causes of visual impairment?

Visual impairment can affect anyone, although it mainly occurs amongst the elderly. The causes are also diverse and can differ from country to country.

The most common causes in our part of the world are age-related macular degeneration (AMD), diabetic retinopathy which is becoming more prevalent, and other diseases such as detachment of the retina, cataracts and glaucoma.

What should be considered when advising those with visual impairment?

Even though many people with impaired vision are mainly interested in receiving help with reading, distance vision must also be tested. In the case of visual impairment, by determining the refraction, we can determine the required optical correction which will provide the best possible visual acuity (visual acuity cc). This is always the starting point for fitting magnifying vision aids. Please also note the information relating to this in brochure 162510.

How is the required magnification determined?

The magnification required for a vision aid is determined by the ratio between the desired visual acuity to the existing visual acuity using the best corrective eyewear.

Normal vision

Central scotoma due to macular degeneration

only the peripheral part of the retina can be used for vision, whilst the macula, the area in the retina that is responsible for central vision, is destroyed.

Tunnel vision due to Retinitis pigmentosa

As the rods in the retina die off, the field of view progressively narrows causing "tunnel vision". Retinitis pigmentosa can lead to blindness.

Reduced visual acuity due to cataracts

Small sections of the retina do not function properly. In the advanced stage, these small sections grow together to form larger areas.

Cataract

Clouding of the lens leads to impaired vision and also to increased light sensitivity.

Glaucoma

Increased pressure in the eye leads to irreversible damage of the optic nerve. In chronic glaucoma, central vision can remain for a long time.

Lens Geometry

Aspheric lenses: allow a large lens diameter even with a high level of magnification and therefore a wide visual field. All aspheric reading magnifiers from Eschenbach Optik have a focusing distance aE (distance of the eye to the virtual image) of 400 mm. This provides a sharp image with reading glasses which have an addition of +2.5 dpt.

A **diffractive aspheric lens** has an additional diffractive structure for correcting chromatic aberrations.

Aplanatic lenses provide an image which is free from spherical aberration and has edge-to-edge sharpness.

Achromatic: the combination of two lenses of different diffractive strength for correcting chromatic aberration.

Meniscus/aspheric Lenses: a combination of meniscus lens and aspheric lens. Allows larger distances than comparable magnifications using other types of lenses and an image which has edge-to-edge sharpness.

Biconvex lens: simple lens with two convex (bulging outwards) spherical lens surfaces.

Planoconvex lens: a special type of convergent lens with only one convex surface, the second surface is flat.

Compound Parabolic Concentrator: a special lens which collects and concentrates light/illumination optics.

Lens Material

PXM® This extremely lightweight and shatter-proof plastic used by Eschenbach Optik has special characteristics which provide maximum optical image quality. In combination with the cera-tec® hard coating, PXM® lenses have a level of scratch resistance which is similar to that of glass.

Silicate offers outstanding optical performance, as well as a high resistance to chemical and mechanical influences. Lenses manufactured from silicate are heavier than plastic lenses.

CR 39 is a very lightweight plastic that has been specially developed for spectacle lenses and offers excellent optical performance.

Tri-Acetate rigid films not only offer a high level of elasticity and resistance to breakage, but also excellent optical performance and are therefore often used as the base films for polarised filter lenses, e.g. for polarised clip-ons.

Polycarbonat (PC) is extremely strong and hard, with a high level of resilience and due to its outstanding optical clarity and lightweight nature is used in particular for protective lenses in the optics field.

Lens coating

cera-tec® hard coating: the extremely resilient coating was specially developed in collaboration with the Fraunhofer Institute for Silicate Research (ICS) for our PXM® lenses.

DUPLEX coating: The antistatic coating of the lenses prevents fogging of the lenses.

Super DUPLEX coating: Duplex with additional hard coating.

Illumination

LEDs are extremely economical to use in comparison to conventional filament light bulbs and have a virtually unlimited service life.

SMD-LED (SMD: Surface Mounted Device; LED: Light Emitting Diode) – special, miniature LED with a higher luminous power than conventional LEDs.

Intelligent automatic shut-off to guard against unnecessary power consumption.
